

## **MGSID SUMMER OPERATORS'S JOB DESCRIPTION**

Part time position. The operators each work from ten to twenty hours per week depending on season and demand. When not doing the manhole and sewer line inspections, operators may be involved in facility maintenance and improvements, vehicle maintenance or in daily sampling and testing. Following are some of the principal tasks of the operators:

- Participating in manhole and sewer line inspection and maintenance operations
- Inspecting inflow, treatment and outflow subsystems to ensure their proper function
- Collecting wastewater samples and measuring their degree of acidity/alkalinity (pH), dissolved oxygen (DO) content, and residual chlorine in the outflow water
- Calibrating pH, DO and residual chlorine instruments
- Reading and recording values registered by various meters and gages
- Entering meter, gage and measurement data in the computer system
- Conducting scheduled maintenance operations such as pump cleaning and oiling, blower oil changes and motor lubrication
- Noting and reporting unusual incidents and potential problems to the administrator
- Troubleshooting and resolving mechanical, electrical and electronic problems with plant equipment
- Assisting in the annual review of system cleaning videos
- Participating in upkeep of the facilities and grounds
- All other duties as deemed necessary

### **BENEFITS**

Holidays are paid at time and a half the hourly rate if the holiday is worked.
